滤波电路-例题

例1图示电路已知 $u_s = 10 + 10\sqrt{2}\cos(1000t + 30^\circ) + 8\cos(2000t + 45^\circ)$ V $C_1 = 10^{-4}$ F, $i = \sqrt{2}\cos(1000t + 30^\circ)$ A,试求R、L和 C_2 。

解:电流只有基波分量,并且与电源电压同相位,此时 LC_1 支路串联谐振则有 $\omega_1 L = \frac{1}{\omega_1 C_1}$

$$\Rightarrow L = \frac{1}{\omega_1^2 C_1} = \frac{1}{(1000)^2 \times 10^{-4}} = 10 \text{mH}$$

$$R = \frac{U_{S(1)}}{I_{(1)}} = \frac{10}{1} = 10\Omega$$

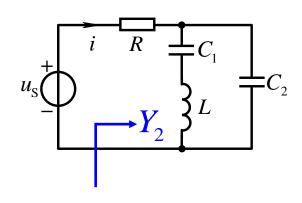

滤波电路-例题

例1 图示电路已知 $u_s = 10 + 10\sqrt{2}\cos(1000t + 30^\circ) + 8\cos(2000t + 45^\circ)$ V $C_1 = 10^{-4}$ F, $i = \sqrt{2}\cos(1000t + 30^\circ)$ A,试求R、L和 C_2 。

电流的二次谐波分量为零,此时 LC_1 和 C_2 发生并联谐振。

则有 $Im[Y_2] = 0$

$$j\omega_2 C_2 + \frac{1}{j\omega_2 L + \frac{1}{j\omega_2 C}} = 0 \qquad \Rightarrow C_2 = \frac{1}{3} \times 10^{-4} \text{ F}$$
