基尔霍夫电压定律

例1 电路如图所示。 已知部分支路电压, 求出其它支路电压。

解: 回路*l*1: $4V+6V+u_1=0$

$$\Rightarrow u_1 = -4V - 6V = -10V$$

回路*l*2: $-u_1 + u_2 - 2V = 0$

$$\Rightarrow u_2 = u_1 + 2V = -8V$$

回路*l*3: $u_3 - 6V - 8V = 0$

$$\Rightarrow u_3 = 6V + 8V = 14V$$

回路*l*4: $8V + u_4 - u_2 = 0$

$$\Rightarrow u_4 = -8V + u_2 = -16V$$
